SUMMARY

Final-year B.Tech (ICT) student at Dhirubhai Ambani University with hands-on production experience building full-stack systems, scalable notification pipelines, and AI-powered RAG agents. Strong backend fundamentals (Node.js, PostgreSQL, REST APIs) complemented by frontend proficiency (React, Next.js). Actively seeking a Software Engineering / Full-Stack where I can contribute to system design, backend infrastructure, and AI automation.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, TypeScript, SQL

Frontend: React.js, Next.js, Tailwind CSS, Material UI

Backend: Node.js, Express.js, Fastify, REST APIs

Databases: PostgreSQL, MongoDB, MySQL, pgvector (vector search), Redis

Tools & Workflow: Git, GitHub, Postman, Turborepo

AI / ML Tools: LLM integration, RAG pipelines, semantic search, contextual chunking, Anthropic API

Design & Other: Figma, Prisma ORM, Agile/Scrum, Selenium, Canva

WORK EXPERIENCE

Full-Stack Developer Intern · Axy Inc., Geneva, Switzerland (Remote)

Dec 2025 – May 2026

Stack: Next.js, Fastify, TypeScript, Prisma, PostgreSQL, AWS (SNS, SQS, Lambda, EventBridge), Turborepo

- Eliminated invalid scheduling data at scale by designing a centralized validation layer in the bulk upload pipeline, reducing data integrity errors across organizer and attendee flows.
- Architected a real-time bidirectional sync system between organizer and attendee platforms, ensuring consistent state synchronization across both platforms.
- Engineered a fan-out notification pipeline using AWS SNS, SQS, Lambda, and EventBridge, processing 500+ users per batch with reliable delivery and built-in retry semantics.
- Executed a zero-downtime content migration of 100+ files from JSON to Markdown format, eliminating data duplication and reducing content management overhead by restructuring the content architecture.

UI/UX Design Intern · Datahay Infotech LLP, Ahmedabad, Gujarat

May 2025 – Jul 2025

Stack: Figma, Canva

- Designed a complete end-to-end entertainment app prototype from scratch — conducting competitive analysis, building user personas, journey maps, and establishing full brand identity (logo, typography, mood board).
- Delivered a high-fidelity Figma prototype with 45+ screens and 22+ reusable components, covering low/high-fidelity wireframes, user flowcharts, and interactive prototyping.

PROJECTS

AutoBiz - Multi-Agent Business Automation Platform | Next.js, FastAPI, LangGraph, Groq, Gemini AI, Deepgram, Stripe API, PostgreSQL 2026

- Architected AutoBiz, a multi-agent business automation platform unifying email, scheduling, content, sales, and finance workflows for small businesses into a single system.
- Built an email reply automation and timezone-aware appointment booking agent with Groq-powered escalation to a human for unresolved queries.
- Developed content agents: a LangGraph- and Gemini-orchestrated newsletter generator, an interactive LinkedIn agent that holds a live voice conversation with the user (Deepgram) to extract input into ready-to-post content, and a social media agent generating branded images and captions from customizable templates.
- Implemented a deal pipeline tracking client status with automated agent-driven follow-ups, and a full invoicing system (recurring billing, estimates, partial payments, credit notes, PDF generation, automated reminders) integrated with Stripe for payment collection.
- Built a task manager automating reminders, scheduled report and newsletter generation, and daily/weekly business briefs, plus a suggestion agent using Groq Compound Mini for real-time internet-informed content ideas.
- Project [Link](#)

- Built a real-time AI voice agent for clinic reception using VAPI (GPT-4o) + n8n, handling inbound phone calls for appointment booking, rescheduling, and general FAQ — end-to-end with no human intervention.
- Engineered a custom MCP server inside n8n to expose callable tools to VAPI, enabling the voice agent to invoke structured workflows mid-conversation (slot checking, booking, confirmation) with reliable tool-use orchestration.
- Automated post-booking confirmation emails via Gmail integration in n8n, triggered immediately on successful appointment creation with patient details and slot information.

SkillPilot — Community Learning Platform | React.js (TypeScript), Express.js, MongoDB, Tailwind CSS, Make.com (AI Agent)
2025

- Built a community-driven learning platform enabling students to discover, share, and validate free educational resources (YouTube, GFG, etc.) with course checkpoints, upvotes, and a community feed.
- Integrated an AI validation agent (Make.com) to automatically verify user-submitted resource links, enforcing content quality at ingestion time.
- Implemented university-specific, semester-wise course path structures, enabling targeted content discovery for 1,000+ potential student users.
- Project [Link](#)

EDUCATION

B.Tech - Information and Communication Technology

Oct 2022 – May 2026

· Dhirubhai Ambani University, Gandhinagar, Gujarat

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Object-Oriented Programming

ACHIEVEMENTS & LEADERSHIP

- Event Coordinator & Team Lead, IEEE I.Fest'23 (i.Ohunt) — Led a cross-functional team of 6 to organize a logic-based technical quiz at Gujarat's No.1 tech fest, drawing 300+ participants from multiple institutions.
- Advanced Milestone — Google Cloud Arcade Program (2025): completed cloud infrastructure projects and labs covering core GCP services.
- Excellent Student Award — recognized for academic and extracurricular performance at secondary level.
